Acknowledgments

Completion of this project was due to the timely contributions of many people. We are very grateful to the Labor Market Information (LMI) Division of the Alabama Department of Labor (ADOL). In addition to financial support from ADOL, LMI provided significant staff time and this report would not have been possible without large amounts of data from LMI.

Many thanks also to our colleagues at the Center for Business and Economic Research, the Capstone Poll, the Institute for Social Science Research, and the University Center for Economic Development for their help on various phases of this research project. Last, but not least, much gratitude is owed to the thousands of Alabamians who responded to the extensive survey on the state's workforce and related issues, as well as to the community and industry leaders whose work on these issues provides the critical data required in reports of this kind.

Funding for this project was provided by:

- Alabama Department of Economic and Community Affairs
- Alabama Department of Labor
- Alabama Department of Postsecondary Education
- Alabama Industrial Development Training
- The University of Alabama

Summary

- This report analyzes workforce supply and demand issues using available metrics of workforce characteristics for Workforce Development Region 4 and presents some implications and recommendations.
- Region 4 had a 5.7 percent unemployment rate in December 2012, with 29,750 unemployed. An underemployment rate of 24.0 percent for 2012 means that the region has a 147,317-strong available labor pool that includes 117,567 underemployed workers who are looking for better jobs and are willing to commute farther and longer for such jobs.
- Commute time and distance are up in 2012 and the number of commuters has risen raising congestion concerns. As the region recovers from the recent recession, congestion is likely to worsen. Thus, continuous maintenance and development of transportation infrastructure and systems is strongly needed to avoid slowing economic development.
- By sector the top five employers in the region are health care and social assistance; retail trade; educational services; accommodation and food services; and finance and insurance. In the first quarter of 2012 these five industries provided 241,011 jobs, 51.3 percent of the regional total. Among the leading employers, only finance and insurance had a higher monthly wage than the region's \$3,855. Economic development should continue to diversify and strengthen the region's economy by retaining, expanding, and attracting more high-wage providing industries. Workforce development should also focus on preparing workers for these industries.
- On average 22,825 jobs were created per quarter from second quarter 2001 to first quarter 2012; quarterly net job flows averaged 1,362. Job creation is the number of new jobs that are created either by new businesses or through expansion of existing firms. Net job flows reflect the difference between current and previous employment at all businesses.
- The top five high-demand occupations are Registered Nurses; Sales Representatives, Wholesale and Manufacturing, Except Technical and Scientific Products; Home Health Aides; Personal and Home Care Aides; and Lawyers.
- The top five fast-growing occupations are Personal and Home Care Aides; Home Health Aides; Occupational Therapist Assistants; Helpers—Pipelayers, Plumbers, Pipefitters, and Steamfitters; and Physical Therapist Assistants.
- The top 50 high-earning occupations are mainly in management, health, engineering, science, and legal fields and have a minimum mean salary of \$84,187. Eight of the top 10 are health occupations.
- Of the top 40 high-demand, the top 20 fast-growing, and 50 high-earning occupations, nine are both high-demand and high-earning and 12 are both high-demand and fast-growing.

- Of the region's 736 occupations, 47 are expected to decline over the 2010 to 2020 period. Twenty occupations are expected to sharply decline by at least nine percent, with each losing a minimum of 10 jobs. Education and training for these 20 occupations should slow accordingly.
- Skill and education requirements for jobs keep rising. Educational and training requirements of high-demand, fast-growing, and high-earning occupations demonstrate the importance of education in developing the future workforce. In the future, more jobs will require postsecondary education and training at a minimum.
- The importance of basic skills generally and for high-demand, high-growth, and high-earning jobs indicates a strong need for training in these skills. For Region 4 the pace of training needs to increase for technical, systems, and complex problem solving skills. The scale of training should be raised for basic and social skills. Ideally, all high school graduates should possess basic skills so that postsecondary and higher education can focus on other and more complex skills. Employers should be an integral part of planning for training as they can help identify future skill needs and any existing gaps.
- From a 2010 base, worker shortfalls of 41,248 and 51,468 are estimated for 2020 and 2030 respectively. This will demand a focus on worker shortfalls and skills through 2030. Worker shortfalls for critical occupations will need to be addressed continuously. Strategies to address skill needs and worker shortfalls might include: (1) improvements in education and its funding; (2) use of economic opportunities that attract new and younger residents; (3) focus on hard-to-serve populations (e.g. out-of-school youth); (4) lowering the high school dropout rate; (5) continuation and enhancement of programs to assess, retrain, and place dislocated workers; and (6) facilitation of in-commuting.
- Improving education is important because (i) a highly educated and productive workforce is a critical economic development asset, (ii) productivity rises with education, (iii) educated people are more likely to work, and (iv) it yields high private and social rates of return on investment. Workforce development must view all of education and other programs (e.g. adult education, career technical training, worker retraining, career readiness, etc.) as one system. Funding to support workforce development may require tax reform at state and local levels and should provide for flexibility as workforce needs change over time and demand different priorities. Publicizing both private and public returns to education can encourage individuals to raise their own educational attainment levels, while also promoting public and legislative support for education.
- Higher incomes that come with improved educational attainment and work skills will help to increase personal income for the region as well as raise additional local (county and city) tax revenues. This is important, even for a region that already has relatively high population and labor force growth rates.

Workforce Supply

Labor Force Activity

The labor force includes all persons in the civilian noninstitutional population who are age 16 and over and who have a job or are actively looking for one. Typically, those who have no job and are not looking for one are not included (e.g. students, retirees, discouraged workers, and the disabled). Table 4.1 shows labor force information for Region 4 and its six counties for 2012 and December 2012. Alabama labor force information is available from the Labor Market Information (LMI) Division of the Alabama Department of Labor. LMI compiles data in cooperation with the U.S. Bureau of Labor Statistics.

Major job losses from the recession that began in December 2007 sharply raised county and regional unemployment rates. A slow recovery from the recession has lowered county unemployment to a range of 5.0 percent to 7.5 percent for 2012 (6.4 percent for the region) and between 4.5 percent and 6.6 percent in December 2012 (5.7 percent for the region). The unemployment rate was lowest in Shelby County and highest in Walker. All the counties' unemployment rates were below Alabama's 6.5 percent, except in Walker.

Table 4.1 Region 4 Labor Force Information

	2012 Annual Average			
	Labor Force	Employed	Unemployed	Rate (%)
Blount	26,358	24,719	1,639	6.2

Source: Alabama Department of Labor and U.S. Bureau of Labor Statistics.

Annual unemployment rates for 2000 to 2012 are shown in Figure 4.1. The region's unemployment rates were low before the 2001 and the most recent recession. After rising to 4.7 percent in 2003, unemployment fell to a record low 3.2 percent in 2007 as a result of job gains arising from regional and state economic development successes. However, the recent recession resulted in major job losses. Unemployment rose to a record high of 9.4 percent in 2010 before declining to 6.4 percent in 2012. Year-to-date monthly labor force data point to a lower regional unemployment rate for 2013 than the 6.4 percent seen in 2012 as the economy recovers.

Source: Alabama Department of Labor.

Nonagricultural employment of the region's residents averaged 495,523 quarterly from the second quarter of 2001 to the first quarter of 2012 (Figure 4.2). The number of jobs continuously declined from the fourth quarter of 2007 through the first quarter of 2010. The regional employment went up from the second quarter of 2011, but slightly declined to about 467,000 jobs in the first quarter of 2012.

Source: Alabama Department of Labor and U.S. Census Bureau.

Table 4.2 shows worker distribution by age in Region 4 for the first quarter of 2012. Older workers, age 55 and over, are 19.8 percent of the region’s nonagricultural employment, just slightly above the state’s 19.7 percent. Workers who are age 65 and over constitute 4.3 percent of nonagricultural employment, just below Alabama’s 4.4 percent. To meet long term occupational projections for growth and replacement, labor force participation of younger residents must increase or older workers may have to work longer.

Table 4.2 Workers by Age Group (First Quarter 2012)

Age Group	Nonagricultural Employment	
	Number	Percent
14-18	6,733	1.4
19-24	47,949	10.2
25-34	107,211	22.8
35-44	107,366	22.9
45-54	107,215	22.8
55-64	73,055	15.6
65+	20,070	4.3
55 and over total	93,125	19.8
Total all ages	469,599	100.0

Note: Rounding errors may be present. Nonagricultural employment is by place of work, not residence. Source: U.S. Census Bureau, Local Employment Dynamics Program.

Commuting Patterns

In 2005 about 27,000 more people commuted into the region for work than residents who commuted out (Table 4.3). The in-commuting jumped up in 2007 but declined to about 26,000 workers in 2010. Despite the slight drop in net in-commuting, commuter outflow rose by 20.4 percent as inflow went up 12.8 percent between 2005 and 2010. Considerable commuting inside the region and the strong increase in the number of commuters point to rising congestion, especially in Jefferson and Shelby counties. Table 4.3 also shows the one-way average commute time and distance for workers in various years. Commute time and distance are slightly up in 2012 from 2011. This implies that congestion has worsened as the economy recovers from the 2007 recession, and is likely to continue worsening. To ensure a smooth and fast flow of goods and movement of workers, regional transportation infrastructure and systems must be maintained and developed properly. Impeding the mobility of workers and goods can delay or slow economic development.

Table 4.3 Commuting Patterns

Year	Region 4 Inflow		Region 4 Outflow

Population

The Region 4 population count of 1,105,132 for 2010 is 7.1 percent more than in 2000 (Table 4.4). This growth rate is lower than Alabama's 7.5 percent. The population grew in four counties and shrank in two. Population growth was fastest in Shelby County followed by St. Clair. Table 4.5 shows population counts, estimates, and projections by age group. The population aged 65 and over is expected to grow rapidly, with the first of the baby boom generation having turned 65 in 2011. Consequently, growth of the prime working age group (20-64) and youth (0-19) will lag that of the total population. This poses a challenge for workforce development as employment growth may outpace labor force growth. Communities that experience worker shortages may need to consider investments in amenities and infrastructure to attract new residents.

Table 4.4 Region 4 Population

	1990 Census	2000 Census	2010 Census	Change 2000-2010	% Change 2000-2010

Per Capita Income

Per capita income (PCI) in Region 4 was \$41,158 in 2011 (Figure 4.3), up 41.0 percent from 2000, and \$6,278 (or 18. percent) more than the state average of \$34,880. Shelby County had the highest PCI at \$44,734, followed by Jefferson at \$44,074. Blount County's PCI was the lowest at \$27,220.

Source: U.S. Bureau of Economic Analysis and Center for Business and Economic Research, The University of Alabama.

Educational Attainment

Educational attainment of Region 4 residents who were 25 years old and over in 2007 to 2011 is shown in Table 4.6 and Figures 4.4 and 4.5. About 85 percent of the residents graduated from high school and 27 percent held a bachelor's or higher degree. Shelby and Jefferson counties had higher educational attainment than both the region and the state. Educational attainment is important as skills rise with education and high-wage jobs for the 21st century demand more skill sets.

Table 4.6 Educational Attainment of Population 25 Years and Over, 2007-2011

	Blount	Chilton	Jefferson	St. Clair	Shelby	Walker	Region 4

Underemployment and Available Labor

Labor force data are often limited to information on the employed and the unemployed that is available from government sources. However, this information is not complete from the perspective of employers. New or expanding employers are also interested in underemployment because current workers are potential employees. In fact, experience requirements in job ads are evidence that many prospective employers look beyond the unemployed for workers.

Workers in occupations that underutilize their experience, training, and skills are underemployed. These workers might look for other work because their current wages are below what they believe they can earn or because they wish to not be underemployed. Underemployment occurs for various reasons including (i) productivity growth, (ii) spousal employment and income, and (iii) family constraints or personal preferences. Underemployment is unique to areas because of the various contributing factors combined with each area's economic, social, and geographic characteristics.

The existence of underemployment identifies economic potential that is not being realized. It is extremely difficult to measure this economic potential because of uncertainties regarding additional income that the underemployed can bring to an area. It is clear, however, that underemployment provides opportunities for selective job creation and economic growth. A business that needs skills prevalent among the underemployed could locate in places that have such workers regardless of those areas' unemployment rates. A low unemployment rate, which may falsely suggest limited labor availability, is therefore not a hindrance to the business.

The underemployed present a significant labor pool because they tend to respond to job opportunities that they believe are better for reasons that include (i) higher income, (ii) more benefits, (iii) superior terms and conditions of employment, and (iv) a better match with skills, training, and experience. The underemployed also create opportunities for entry level workers as they leave lower-paying jobs for better-paying ones. Even if their previously held positions are lost or not filled (perhaps due to low unemployment or adverse economic conditions), there is economic growth in gaining higher-paying jobs. Such income growth boosts consumption, savings, and tax collections. Quantifying the size of the underemployed is a necessary first step in considering this group for economic development, workforce training, planning, and other purposes. It is important to note that the underemployed can take on more responsibilities and earn more income, but they cannot be counted on to address possible future worker shortages as they are already employed.

Region 4 had an underemployment rate of 24.0 percent in 2012. Applying this rate to December 2012 labor force data means that 117,567 employed residents were underemployed (Table 4.7). Adding the unemployed gives a total available labor pool of 147,317 for the region. This is five times the number of unemployed and is a more realistic measure of the available labor pool in the region. Prospective employers must be able to offer the underemployed higher wages, better benefits or terms of employment, or some other incentives to induce them to change jobs. Underemployment rates ranged from 16.1 percent for Chilton County 35.1 percent for Walker. Chilton County had the smallest available labor pool and Jefferson had the largest. The underemployed workers are willing to commute farther and longer for a better job. For the one-way commute, 42.2 percent are prepared for 20 or more minutes longer and 25.6 percent will go 20 or more extra miles.

Table 4.7 Underemployed and Available Labor by Workforce Development Region

	Region 4	Blount	Chilton	Jefferson	St. Clair	Shelby	Walker
Labor Force	520,430	26,256	19,907	304,802	37,715	104,474	27,276

Source: Center for Business and Economic Research, The University of Alabama and Alabama Department of Labor.

Underemployment rates for counties, Workforce Development Regions (WDRs), and the state were determined from an extensive survey on the state's workforce. In 2012 a total of 1,295 complete responses were obtained from Region 4. About 45 percent (576 respondents) were employed, of whom 138 stated that they were underemployed. A lack of job opportunities in their area, low wages at available jobs, other family or personal obligations, child care responsibilities, and owning a house in the area are the primary reasons given for being underemployed. Ongoing economic development efforts can help address some of these factors. Nonworkers cite retirement and disability or other health concerns as the main reasons for their status, but a significant number also cited social security limitations. Such workers may join the labor force if their problems can be addressed.

A comparison of underemployed workers to the overall workforce in Region 4 shows that:

- Fewer work full-time and more of the part-timers would like to work full-time.
- More hold multiple jobs.
- They have shorter commute times and distances.
- More work in architecture and engineering; life, physical and social science; arts and entertainment; healthcare practitioners and technicians; protective service; building and grounds cleaning and maintenance; food preparation and serving; sales and related; farming, fishing, and forestry; production; and transportation and material moving occupations.
- More are in retail trade; transportation and warehousing; management of companies and enterprises; administrative and support and waste management and remediation services; arts, entertainment, and recreation; health care and social services; and accommodation and food services industries.
- They have shorter job tenure and earn less.
- Fewer believe their jobs fit well with their education and training, skills, and experience.
- More believe they are qualified for a better job.
- More are willing to leave their current jobs for higher income.
- More are willing to commute longer and farther for a better job.
- Fewer are satisfied with their current jobs.
- More have sought better jobs in the preceding quarter.
- More are willing to train for a better job except when they have to pay all of the cost.
- They have a slightly lower median age.
- They are more likely to have postgraduate education, associate degree and some college education but less likely to have a bachelors degree.
- Fewer are married or male.
- More are African Americans or other nonwhite ethnic groups.

Table 4.8 shows the detailed survey results on job satisfaction and willingness to train. Responses for overall job satisfaction as well as various aspects of the job were obtained. In general, most of the region's workers (75.5 percent) are satisfied or completely satisfied with their jobs. Workers are most satisfied with the work that they do and least satisfied with the earnings they receive. Clearly, fewer underemployed workers are satisfied with their jobs (54.3 percent). The underemployed are most satisfied with their work shift and least satisfied with their earnings.

Workers are generally willing to train for a new or better job, with the underemployed being much more willing (64 percent vs. 55 percent). However, the willingness to train is strongly influenced by who pays for the cost of training. Workers typically do not wish to pay for the training and so their willingness is highest when the cost is fully borne by government and lowest when the trainee must pay the full costs. Except for when they have to pay the full costs of training, the underemployed are more willing to train for a new or better job. The results strongly show that workers want the government to bear at least a part of the training cost. This expectation may result from worker awareness of government workforce programs that provide such assistance.

Table 4.8 Job Satisfaction and Willingness to Train (Percent)

		Job Satisfaction				
		Completely Dissatisfied	Dissatisfied	Neutral	Satisfied	Completely Satisfied
Employed

Workforce Demand

Industry Mix

The health care and social assistance industry was the leading employer with 67,876 jobs in the first quarter of 2012 (Table 4.9). Rounding out the top five industries by employment are retail trade; educational services; accommodation and food services; and finance and insurance. These five industries provided 241,011 jobs, 51.3 percent of the regional total. The average monthly wage across all industries in the region was \$3,855; only one leading employer—finance and insurance—paid more than this average. New hire monthly earnings averaged \$2,251 about 58 percent of the region’s average monthly wage. The highest average monthly wages were for utilities at \$9,162, mining \$6,057, finance and insurance \$5,809, and information at \$5,658. Accommodation and food services paid the least at \$1,515. Utilities had the highest average monthly new hire wages at \$6,430, followed by mining at \$4,647. Arts, entertainment, and recreation paid newly hired workers the least, \$849.

Table 4.9 Industry Mix (First Quarter 2012)

Industry by 2-digit NAICS Code	Total Employment	Share	Rank	Average Monthly Wage	Average Monthly New Hire Earnings
11 Agriculture, Forestry, Fishing and Hunting	714	0.15%	20	\$3,671	\$2,341
21 Mining	2,998	0.64%	19	\$6,057	\$4,647
22 Utilities	9,212	1.96%	16	\$9,162	\$6,430
23 Construction	22,697	4.83%	10	\$4,087	\$3,106
31-33 Manufacturing	35,388	7.54%	6	\$4,258	\$2,882
42 Wholesale Trade	27,776	5.91%	7	\$5,061	\$3,420
44-45 Retail Trade	60,174	12.81%	2	\$2,400	\$1,286
48-49 Transportation and Warehousing	13,463	2.87%	13	\$3,590	\$2,580
51 Information	9,641	2.05%	15	\$5,658	\$3,416
52 Finance and Insurance	35,415	7.54%	5	\$5,809	\$4,050
53 Real Estate and Rental and Leasing	6,367	1.36%	17	\$3,905	\$2,681
54 Professional, Scientific, and Technical Services	25,783	5.49%	9	\$5,174	\$3,575
55 Management of Companies and Enterprises	10,153	2.16%	14	\$4,890	\$3,036
56 Administrative and Support and Waste Management and Remediation Services	26,069	5.55%	8	\$2,526	\$1,810
61 Educational Services	40,153	8.55%	3	\$3,377	\$1,352
62 Health Care and Social Assistance	67,876	14.45%	1	\$3,701	\$2,545
71 Arts, Entertainment, and Recreation	4,905	1.04%	18	\$1,680	\$849

81 Other Services (Except Public Administration)	14,028	2.99%	12	\$3,362	\$2,006
92 Public Administration	19,395	4.13%	11	\$3,501	\$2,011
ALL INDUSTRIES	469,600	100.00%		\$3,855	\$2,251

Source: Alabama Department of Labor and U.S. Census Bureau.

By broad industry classification, service providing industries generated 82.7 percent of jobs in first quarter 2012 (Figure 4.6). Goods producing industries were next with 13.2 percent and public

administration accounted for 4.1 percent. The distribution is for all nonagricultural jobs in the region, but there is significant variation by county.

Source: Alabama Department of Labor and U.S. Census Bureau.

Job Creation and Net Job Flows

On average 22,825 jobs were created per quarter from second quarter 2001 to first quarter 2012 (Figure 4.7) while quarterly net job flows averaged 1,362 (Figure 4.8). Both job creation and net job flows were up strongly in the second quarter of 2011 but declined immediately. Quarterly net job flows fluctuate considerably and have ranged from a loss of 7,626 to a gain of 9,212. Job creation refers to the number of new jobs that are added either by new area businesses or through the expansion of existing firms. Net job flows reflect the difference between current and previous employment at all businesses.

High-Demand, Fast-Growing, High-Earning, and Sharp-Declining Occupations

Workforce Development Region 4 has 736 single occupations. Table 4.10 shows the 40 occupations that are expected to be in high-demand, ranked by projected average annual job openings over the 2010 to 2030 period. Many of these occupations are in the largest employment sector identified earlier (Table 4.9): health care and social assistance. Thus, this sector will continue to dominate employment in the region.

The top five high-demand occupations are Registered Nurses; Sales Representatives, Wholesale and Manufacturing, Except Technical and Scientific Products; Home Health Aides; Personal and Home Care Aides; and Lawyers. Twelve of the high-demand occupations are also fast-growing. This means that these 12 occupations have a minimum annual growth rate of 3.47 percent, much faster than the regional and state occupational growth rates of 1.32 percent and 1.30 percent, respectively.

The 20 fastest growing occupations ranked by projected growth of employment are listed in Table 4.11. Most of these occupations are related to health care and social assistance industry. The top five fast-growing occupations are Personal and Home Care Aides; Home Health Aides; Occupational Therapist Assistants; Helpers—Pipelayers, Plumbers, Pipefitters, and Steamfitters; and Physical Therapist Assistants.

Table 4.12 shows the 50 selected highest earning occupations in the region. These occupations are mainly in management, health, engineering, science, and legal fields. Eight of the top 10 listed are health occupations. Any discussion of earnings must consider that wages vary with experience. Occupations with the highest entry wages may not necessarily have the highest average or experienced wages.

The selected high-earning occupations are generally not fast-growing or in high-demand. Indeed, none of the occupations belong in all the three categories. Nine occupations are both high-earning and in high-demand (Table 4.10).

Of the region's 736 occupations, 47 are expected to decline over the 2010 to 2020 period. Employment in the 20 sharpest-declining occupations will fall by at least 9 percent, with each losing a minimum of 10 jobs over the period (Table 4.13). No efforts should be made to sustain these occupations because they are declining as a result of structural changes in the economy of the region.

Table 4.10 Selected High-Demand Occupations (Base Year 2010 and Projected Year 2020)

Occupation	Average Annual Job Openings		
	Total	Due to Growth	Due to Separations

Skills and Skills Gap Analyses

Jobs require skill sets and it is necessary that jobholders have the relevant skills. Table 4.14 shows skill types and definitions as provided by O*NET Online, which offers skill sets for all occupations ranked by the degree of importance. High-earning occupations typically require skills that are obtained in the pursuit of the high educational attainment levels that such jobs require. Lower earning occupations require more basic skill sets. Some occupations have no minimum skill set requirements (e.g. dishwashers and maids).

Table 4.15 shows the percentage of selected occupations in the region that list a particular skill as primary. We define primary skills as the 10 most important skills in the required skill set for an occupation. It is important to note that a particular skill may be more important and more extensively used in one occupation than another. Table 4.15 does not address such cross-occupational skill importance comparisons. In general, basic skills are most frequently listed as primary, which means that they are important for practically all jobs.

Table 4.14 Skill Types and Definitions

<p>Basic Skills: Developed capacities that facilitate learning or the more rapid acquisition of knowledge.</p> <p>Active Learning — Understanding the implications of new information for both current and future problem-solving and decision-making.</p> <p>Active Listening — Giving full attention to what other people are saying, taking time to understand the points being made, asking questions as appropriate, and not interrupting at inappropriate times.</p> <p>Critical Thinking — Using logic and reasoning to identify the strengths and weaknesses of alternative solutions, conclusions, or approaches to problems.</p> <p>Learning Strategies — Selecting and using training/instructional methods and procedures appropriate for the situation when learning or teaching new things.</p> <p>Mathematics — Using mathematics to solve problems.</p> <p>Monitoring — Monitoring / Assessing performance of yourself, other individuals, or organizations to make improvements or take corrective action.</p> <p>Reading Comprehension — Understanding written sentences and paragraphs in work-related documents.</p> <p>Science — Using scientific rules and methods to solve problems.</p> <p>Speaking — Talking to others to convey information effectively.</p> <p>Writing — Communicating effectively in writing as appropriate for the needs of the audience.</p> <p>Complex Problem Solving Skills: Developed capacities used to solve novel, ill-defined problems in complex, real-world settings.</p> <p>Complex Problem Solving — Identifying complex problems and reviewing related information to develop and evaluate options and implement solutions.</p> <p>Resource Management Skills: Developed capacities used to allocate resources efficiently.</p> <p>Management of Financial Resources — Determining how money will be spent to get the work done and accounting for these expenditures.</p> <p>Management of Material Resources — Obtaining and seeing to the appropriate use of equipment, facilities, and materials needed to do certain work.</p> <p>Management of Personnel Resources — Motivating, developing, and directing people as they work, identifying the best people for the job.</p> <p>Time Management — Managing one's own time and the time of others.</p> <p>Social Skills: Developed capacities used to work with people to achieve goals.</p> <p>Coordination — Adjusting actions in relation to others' actions.</p> <p>Instructing — Teaching others how to do something.</p> <p>Negotiation — Bringing others together and trying to reconcile differences.</p> <p>Persuasion — Persuading others to change their minds or behavior.</p> <p>Service Orientation — Actively looking for ways to help people.</p> <p>Social Perceptiveness — Being aware of others' reactions and understanding why they react as they do.</p> <p>Systems Skills: Developed capacities used to understand, monitor, and improve socio-technical systems.</p> <p>Judgment and Decision Making — Considering the relative costs and benefits of potential actions to choose the most appropriate one.</p> <p>Systems Analysis — Determining how a system should work and how changes in conditions, operations, and the environment will affect outcomes.</p> <p>Systems Evaluation — Identifying measures or indicators of system performance and the actions needed to improve or correct performance, relative to the goals of the system.</p> <p>Technical Skills: Developed capacities used to design, set-up, operate, and correct malfunctions involving application of machines or technological systems.</p> <p>Equipment Maintenance — Performing routine maintenance on equipment and determining when and what kind of maintenance is needed.</p> <p>Equipment Selection — Determining the kind of tools and equipment needed to do a job.</p> <p>Installation — Installing equipment, machines, wiring, or programs to meet specifications.</p> <p>Operation and Control — Controlling operations of equipment or systems.</p> <p>Operation Monitoring — Watching gauges, dials, or other indicators to make sure a machine is working properly.</p> <p>Operations Analysis — Analyzing needs and product requirements to create a design.</p> <p>Programming — Writing computer programs for various purposes.</p> <p>Quality Control Analysis — Conducting tests and inspections of products, services, or processes to evaluate quality or performance.</p> <p>Repairing — Repairing machines or systems using the needed tools.</p> <p>Technology Design — Generating or adapting equipment and technology to serve user needs.</p> <p>Troubleshooting — Determining causes of operating errors and deciding what to do about it.</p>

High-earning occupations require more active learning, learning strategies, mathematics, science, management of personnel resources, negotiation, persuasion, and operations analysis skills than both high-demand and fast-growing jobs. These are skills that require long training periods and postsecondary education. However, high-earning jobs require somewhat less basic, social, systems, and technical skills. High-demand occupations require more basic skills, systems, and technical skills than fast-growing occupations.

Table 4.16 shows skill gap indexes for all 35 skills in Table 4.14 based on previous occupation projections (2008 to 2018). Skills gap indexes range from zero to 100 and are standardized measures of the gap between current supply and projected demand. The index does not provide any information about current or base year skill supply. Its focus is on the projection period and identifies critical skill needs. The index essentially ranks expected training needs. The higher the index the more critical is the skill over the specified projection period.

For policy and planning purposes, skill gap indexes have to be considered together with replacement indexes, which are the expected shares of job openings due to replacement. Replacement is necessary because of turnover and people leaving the labor force. The smaller the replacement index, the larger the share of job openings due to growth, which in turn implies a need to increase the pace of skill training. Skill gap indexes point to the need to ramp up the scale of skill training while replacement indexes address the pace of training.

By skill type the skill gap indexes show that basic skills are most critical followed by social, complex problem solving, resource management, system, and technical skills. Although the skills gap indexes are for a previous projection period, they are applicable to the current projections. The importance of basic skills generally and for high-demand, high-growth, and high-earning jobs indicates a strong need for training in these skills. The pace of training needs to increase for systems, technical, and complex problem solving skills; the scale of training should be raised for basic and social skills.

Education and Training Issues

Educational attainment in Region 4 is above that of the state as a whole. About 85 percent of residents age 25 and over had graduated from high school in 2007 to 2011, compared to 82 percent for Alabama; 27 percent have a bachelor's or higher degree versus 22 percent for the state. Skill and education requirements for jobs keep rising. This highlights a strong need to raise educational attainment in the region, especially for Blount, Chilton, Walker, and St. Clair counties.

Table 4.17 shows the number of selected occupations in the region for which a particular education/training category is most common. In general, high-earning occupations require high educational attainment levels; six of the 50 high-earning occupations do not require a bachelors' or higher degree. Thirty-one (78 percent) of the 40 high-demand occupations require an associate degree at the minimum and 26 (65 percent) require a bachelor's or higher degree. Thirteen (65 percent) of the 20 fast-growing occupations require an associate degree at the minimum, with eight (40 percent) requiring a bachelor's or higher degree.

The 2010 to 2020 occupational projections indicate that future jobs will require postsecondary education and training at a minimum. Job ads are increasingly requiring a high school diploma or

GED at a minimum. Of the region's 736 occupations, 47 are expected to decline over the period and education and training for these should slow accordingly.

Table 4.16 Skills Gap Indexes (Base Year 2008 and Projected Year 2018)

Skill	Total Openings (Projected Demand)	Replacement Index	Skills Gap Index
Reading Comprehension	9,465	66	100
Active Listening	9,425	67	97
Critical Thinking	8,680	65	94
Speaking	7,595	64	91
Active Learning	7,685	65	89
Coordination	7,375	65	86
Monitoring	6,975	65	83
Writing	6,750	66	80
Instructing	6,485	64	77
Time Management	6,365	64	74
Learning Strategies	6,130	64	71
Social Perceptiveness	5,690	64	69
Service Orientation	5,270	63	66
Persuasion	4,800	66	63
Judgment and Decision Making	4,510	66	60
Complex Problem Identification	4,165	64	57
Mathematics	3,745	66	54
Equipment Selection	2,890	66	51
Negotiation	2,630	69	49
Troubleshooting	2,090	64	46

Note: The skills gap indexes are from 2008 to 2018 projection period and not 2010 to 2020.

Table 4.17 Number of Selected Occupations by Education/Training Requirement

Most Common Education/Training Requirements Categories	Selected High-Demand Occupations	Selected Fast-Growing Occupations	Selected High-Earning Occupations
Doctoral Degree or First Professional Degree	9	1	16
Master's Degree	4	4	1
Work Experience Plus a Bachelor's or Higher Degree	4	1	17
Bachelor's Degree	9	2	10
Associate Degree	5	5	2
Postsecondary Non-Degree Plus On-the-job Training	0	0	0
Postsecondary Non-Degree	1	0	0
Some College, no Degree Plus On-the-job Training	1	0	1
Some College, no Degree	0	0	0
High School Diploma Plus On-the-job Training	4	4	0
High School Diploma	0	0	3
Less than High School Plus On-the-job Training	3	3	0
Less than High School	0	0	0

Note: The on-the-job training refers to the typical on-the-job training needed to attain competency in the occupation in addition to the typical education needed for entry to the occupation. This could be long-term, moderate-term, or short-term on-the-job training. **Long-term** requires more than 12 months on-the-job training. **Moderate-term** requires one to 12 months of on-the-job training. **Short-term** requires up to one month of on-the-job training. These types of training are more common in occupations that require postsecondary non-degree or less educational attainment. Other types of on-the-job training requirements that may be needed but are not shown on the table are apprenticeship and internship/residency that are typical in certain professions many of which require higher educational attainment.

Implications and Recommendations

From a 2010 base, worker shortfalls of 41,248 and 51,468 are expected for 2020 and 2030 respectively (Table 4.18). This is because job growth is expected to be faster than the growth of the prime working age population. A focus on worker skills and the anticipated worker shortfalls must be a priority through 2030.

Table 4.18 Expected Worker Shortfall

	2010-2020	2010-2030
Total population growth (percent)	7.1	12.9
Age 20-64 population growth (percent)	2.5	3.5
Job growth (percent)	8.9	11.5
Worker shortfall (percent)	6.4	7.9
Worker shortfall (number)	41,248	51,468

Source: Center for Business and Economic Research, The University of Alabama.

Employment is critical to economic development and so strategies to address potential skill needs and worker shortfalls must be adopted and implemented. Such strategies should aim at increasing labor force participation, encouraging in-migration, and raising worker productivity and must include: (1) improvements in education and its funding; (2) continuation and enhancement of programs to assess, retrain, and place dislocated workers; (3) focus on hard-to-serve populations (e.g. out-of-school youth); (4) lowering the high school dropout rate; (5) offer economic opportunities that attract new and younger residents; (6) encouragement of older worker participation in the labor force; and (7) facilitation of in-commuting.

Improving education is vital because a highly educated and productive workforce is a critical economic development asset. The educational and training requirements of high-demand, fast-growing, and high-earning occupations show the significance of education in developing the workforce of the future. The importance of basic skills generally and for high-demand, high-growth, and high-earning jobs demonstrates a strong need for training in these skills. The pace of training needs to increase for technical, systems, and complex problem solving skills. The scale of training should be raised for basic and social skills. Ideally, all high school graduates should possess basic skills so that postsecondary and higher education can focus on other and more complex skills while enhancing these basic skills. Employers should be an integral part of planning for training as they can help identify future skill needs and any existing gaps. Education and training for the 20 sharp-declining occupations in Table 4.13 should slow accordingly.

Another very important reason to improve education is that more educated people are more likely to work; data on worker participation and educational attainment show that labor force participation increases with worker education. Productivity also rises with education, which yields high private and social returns. Workforce development must view all of the education and other programs (e.g. adult education, career technical training, worker retraining, career readiness, etc.) as one system. Funding to support workforce development may require tax reform at state and local levels and must provide for flexibility as workforce needs change over time and demand different priorities.

Programs to assess, retrain, and place dislocated workers—especially those affected by outsourcing and structural changes in the economy—should be continued and enhanced because they can improve the labor force participation rate. Hard-to-serve populations include persons in poverty, those receiving welfare, those in sparsely populated areas, and those on active parole. These populations are often outside of the mainstream economy and are in poverty. They usually have difficulty finding work because they have low levels of educational attainment, lack occupational skills, or face geographic or other barriers. They are a potential human resource, but investment in training, transportation, child care, infrastructure, etc. may be needed to tap this resource.

In-migration is one way of growing the labor force as it helps population growth. The region's population growth rate is adequate to meet the expected long term job demands barring future economic slowdowns. Higher employment demand could be served by in-commuting. However, new residents can be attracted using the higher-paying job opportunities from the region's economic development successes. Investment in amenities and infrastructure may be needed to support such growth. In-migration is generally more beneficial than in-commuting since it grows the economy faster and adds to the tax base.

Policies that facilitate and encourage older worker participation are needed as older workers can help meet the region's workforce challenge. Such policies can be related to income taxation, job flexibility, and retirement programs. As the share of older people in the population is projected to increase (see Table 4.5), it becomes even more important that they be active in the workforce. Older worker participation has been rising nationally since the early 1990s. This has been attributed to reasons including:

- Older workers can work longer because they are healthier
- The number of physically demanding jobs is falling
- Defined contribution plans are replacing pensions
- There are fewer employer-paid retiree health insurance programs
- Social security reforms affecting those born after 1938 (i) gradually raise the normal retirement age from 65 to 67, (ii) increase the rate at which monthly payments rise with delayed benefits, and (iii) eliminate the reduction in benefits for those working beyond the full retirement age.

Diversifying the region's economy will strengthen it. This demands that economic development also focus on retaining, expanding, and attracting businesses that provide more high-earning jobs. Current workers—including the underemployed—would welcome higher-earning opportunities. An economic development focus on diversification would require that workforce development pay attention to postsecondary and higher educational systems to ensure a ready and available workforce for new and expanding businesses. The higher incomes earned by graduates of these institutions would help raise personal income for the region and provide additional local (county and city) tax revenue. Raising personal income by improving educational attainment and technological skills is an effective economic development strategy even for a region that has relatively high population and labor force growth rates. Together, workforce development and economic development can build a strong, well-diversified economy. Indeed, one cannot achieve success without the other.
